Next level of Notes Client administration: further development of ClientGenie BCC announces the version 4.0

Langen, September 17, 2007 - Notes/Domino infrastructure management expert BCC sets the course for the future roadmap of the technology-leading Client Management solution ClientGenie. The version 4.0 is expected to be available in November 2007.

Client management, the day-to-day tasks associated with managing and administering IBM Lotus Notes Clients, is one of the most time-consuming operations in Notes environments. Desktop icons and bookmarks need to be added, changed, and removed, location and connection configurations need to be adjusted to each user. In the process, the group allocations and geographical location of the users have to be considered. Organizational changes and the need to reduce the Total Cost of Ownership (TCO) pose a challenge, which need to be met in course of server migration and consolidation projects, because extensive modifications are required to the Lotus Notes Clients. More and more companies realise, that a Client Management solution is required to manage these tasks in addition to the native Domino / Notes instruments.

With the new ClientGenie version 4.0 BCC consistently realises the vision of the company „SECURE, SAVE AUTOMATE“ in the area of Lotus Notes Client Management. BCC intend to ease the management of Lotus Notes Clients substantially by enabling a comprehensive centralized administration.

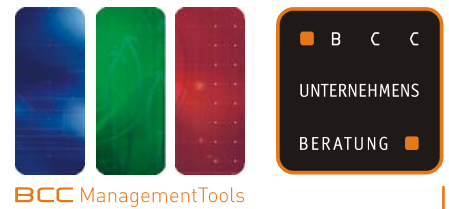

ClientGenie is a technology-leading and well proven solution, which was originally developed by the Austrian Icodex Software AG (since June 2007 a subsidiary company of BCC). One year after releasing the current version 3.1, the development now progresses by the upcoming version 4.0. BCC's experts are skilled in this matter due to their long-time project experiences and the complementary functions of the own tool BCC_ClientConfigurator.

In the course of the further development of ClientGenie, the advantages of both products will be combined to build a join product. The features of BCC_ClientConfigurator 5.0 will be successively integrated in the upcoming ClientGenie versions. The product name BCC_ClientConfigurator will be withdrawn in favour of ClientGenie due to its higher awareness level.

In order to implement an integrated Client and User Management, BCC plan to provide an extensive integration with the BCC_AdminTool in future ClientGenie versions later in 2008. This will allow handling all the required actions at the Lotus Notes Client centrally and in a process oriented way.

The further development of ClientGenie and the integration into BCC's product line, the customers may expect to raise the level of automation and with it to reduce the total cost of ownership significantly.
